Supplementary Figure 3: Analysis of Notch reporter activity in lineage positive cells

Single cell suspensions were prepared from the bone marrow of control and TNR transgenic mice and analyzed by flow cytometry for expression of GFP and lineage-specific markers. B220 includes B lineage cells, CD4 and CD8 mark the T cell lineage, Gr-1 and Mac-1 mark the myeloid lineage, and Ter119 marks the erythroid lineage. Averaged bar graphs of these data are shown in **Fig. 1e**.
